Bluetooth 4.0 Karte AirDrop Hand-Off Hilfe!!!

Beitrag von „alex4you83“ vom 10. Juni 2018, 21:19

So nun hat es mit einer anderen Methode funktioniert. Das MacBook findet nun mein iPhone , nur wenn ich Bilder und Co. vom iPhone zum MacBook senden will, findet das iPhone es nicht bei AirDrop habt Ihr eine Idee was ich machen kann? Einen Neustart des iPhone habe ich bereits versucht.

Also das hier hat mein Problem mit der BT Karte funktioniert:

After replacing your bluetooth card with a Bluetooth LE/4 card: Make sure the Bluetooth card is BCM94331PCIEBT4CAX (if it doesn't have the C then its a Bluetooth 2 card which wouldn't work)

And away we go!

on your desktop press command+shift+g

type: /system/library/extensions/

find: IO80211Family.kext in the extensions folder and copy it to your desktop

on the new copy, do show package contents > Contents > PlugIns > AirPortBrcm4360.kext >

show package contents > Contents > MacOS > open AirPortBrcm4360 with HexFiend

Text search Mac- it should be followed by a number

type the below code in terminal this will show your board id example early 2011 macbook pro is Mac-94245B3640C91C81

replace the first number in your kext with the number u get in terminal

save it

Restart your Mac and hold Cmd-R to boot in recovery mode

Once rebooted, open terminal and type in the following code: csrutil disable

Restart your Mac in normal mode

go to terminal and paste:

delete the original IO80211Family.kext in system>library>extensions

restart

your wifi will not be working after restart

use kextdrop to install the modified kext

restart

your wifi should start working again after installing the kext and restarting

Restart your Mac in recovery mode again (holding Cmd-R when you reboot)

Open terminal and type: csrutil enable

Restart your Mac

go to system preferences > general and there should be an option to enable handoff

These are the exact steps I performed with OS X El Capitan on a 13 inch early 2011 macbook pro and got handoff working with my iPhone 6 running iOS 9.1

Good luck!
