Installation of Mojave with Ozmosis using HD 4600

Beitrag von „ammoune78“ vom 17. Juni 2018, 11:51

Unfortunately it doesn't show something in the boot-args, it remain only in a black screen. Maybe we need someone that have HD 4600 to try booting Mojave using Ozmosis?

Got it working using the settings above from BIOS:

Intel Processor Graphics Memory Allocation to 32M

[DVMT](#) Total Memory Size to 128M

But, after installing Mojave, surprised by no Dark Mode, it looks like High Sierra, with content of Mojave. Damn thing, finished the first problem, now running into another. But finally got it working 🐸 .

Is there a clover patch for HD 4600, please?
