

# Bios Lenovo T430

Beitrag von „ozomatzinboy“ vom 18. Juni 2018, 03:02

## Zitat von Circuit

Schönen guten Tag,  
ich habe da mal ne frage was ich alles im Bios umstellen muss  
da mit ich mein Hackintosh installieren kann

- Bios bereits geupdatet
- Wiki auch schon gelesen

Mein Problem ist das mein Laptop sich immer neustartet sobald ich  
versuche...

Hi Circuit, use the efi attached, just paste it in you efi partition of your usb installer, it works with high sierra as well as with sierra, everything works ok, no wifi, you have to buy a tenda 150 it goes, or any other with macos drivers...mount your efi with the esp mounter attached...you have not to install clover just with the efi attached, for post install ...the same thing, mount your efi part of your hdd of your t430, paste the same efi folder and you are done...good luck!!!!another detail very important...configuere your t430 bios boot section to uefi only...!!!!
