Mojave installation

Beitrag von „Schwarzkopf“ vom 21. Juni 2018, 12:35

hier der webdriver patch für Mojave

Zitat

ok here are the web drivers already patched for developer beta 2, simply follow the instructions and you will have a better working system, partial support but is better than broken graphics or low resolution

install the web drivers

You will get a message

generic drivers being used blah blah

simply click not now

When it finishes installing the web drivers do not click on restart

Go to library/extensions and delete NVDASharedWeb.kext

also delete it from trash

now open KCPM Utility Pro

Click select and browse for the patched version of NVDAStartupWeb.kext

click select then execute

Make sure the file is being install in Library/Extension before you click execute

Click ok

close KCPM Utility Pro

Now click restart on Nvidia web driver installer
