Thanks a lot for your quick response!
I understand how i was stuck at UEFITool. I tried to open the BIOS file but it was in grey in the opening panel (non selectable) so I thought that wasn't the right file...
But now I see that we have to drag and drop the BIOS file on the UEFITool window 🙂

However, I'm not sure if I stopped the selection at the right place in the hex editor... I attached a screenshot of the selection in Hex Fiend.

Thanks again for your help!
