Who can help me convert the default.plist (Clover to Ozmosis) ?

Beitrag von „al6042“ vom 1. Juli 2018, 12:51

I don't believe that this is connected to the defaults.plist.

Any changes to your BIOS with the UEFI-Tool, MMTools or whatever other application will make your ROM unusable...

That's why I already asked if you have an already working ROM for your Coffee Lake Board...

The problem itself is already common knowledge, that's related to the different approaches between Aptio 4 (working) and Aptio 5 (not working) ROMs.

That is also the reason why I told you to stick with clover, which is known to work without fumbling around with a ROM you might never be able to work with Ozmosis.
