#HDEF-layout13

Note: Change your layout ID if you need something different

Note: "hda-gfx" is not needed with Haswell and should probably be removed

Inject Audio info

into method label _DSM parent_label HDEF remove_entry;

into device label HDEF insert

begin

Method (_DSM, 4, NotSerialized)\n

{\n

If (LEqual (Arg2, Zero)) { Return (Buffer() { 0x03 }) }\n

Return (Package())\n

{\n

"layout-id", Buffer(0x04) { 13, 0x0D, 0x00, 0x00 },\n

"hda-gfx", Buffer(0x0A) { "onboard-1" },\n

"PinConfigurations", Buffer() { },\n

/"MaximumBootBeepVolume", 77,\n

})\n

}\n

end;

So muss das, oder?
