Same problem as before? Nvidia off and fan on high power?

Have you test the kext without the patched ssdt's?

Hi

I most sys in once thanks because of your help me all time.

I installed lilu kext by you " Für diesen Kext wird min Lilu.kext V1.2.6 benötigt." and copy it to the clover kexts

copy WhatEverGreen to the clover kexts

use -wegnoegpu disable-external-gpu in the config.

but gtx is on !!!

I don't use any ssdt patch or dsdt pach for gtx .
