Skylake Sammelthread (Hilfe und Diskussionen)

Beitrag von „Politic“ vom 11. August 2018, 22:14

After the tutorial and change, the system did not boot.

In the Clover USB installation on the Devices tab, I canceled the Audio Inject and marked resetHDA. I inserted a new Origin with aml in the installation file. And I made a new install.

After installing, the HDMI setup already appeared in the audio setting and I did not have to install Voodoo.

So super helped - I do not know what ???

Examples of the EFI set

Thanks for help
