## **macOS Mojave Ozmosis BETA – OZ167X-XMAX**

**Beitrag von „nrchandar0100“ vom 16. August 2018, 15:11**

Hi

I will explain what exactly happens after installing ozmosis.

1. when reboot the system i will go to bios and change the following thing

Configuring [BIOS settings](#)

SATA-Mode: AHCI

xHCI-Mode : Auto

xHCI-Hand Off : Enabled

EHCI-Hand Off : Enabled

VT-d: Disable

Wake On Lan : Disable

Fast Boot: Disable

Secure Boot : Disable

CPU EIST : Disable

Internal GPU: Disable

Processor Graphics: Disable

Initial Graphics Device: PCIe Slot 1

RAM mode: Optimize

after this i will save and reboot the system.

when i reboot i will press the option key and all the bootable disks are shown.

i will select mojave and hit enter.

immediately apple logo is seen and white progress bar will reach the end.

once it reaches the the monitor will go black and system is rebooting. i can see the power indicators and hdd indicators are blinking on the system but no display on the monitor the monitor light indicator is on standby mode.

This is what exactly happens

Thanks
