macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „kuckkuck“ vom 18. August 2018, 11:24

As I said:

If you have a working system, go to systempreferences, startvolume, select Mojave and reboot.

If you don't have a working system, go to the shell, navigate through the partitions and find out which one belongs to your Mojave Installation. Then add a new boot entry for that partition using the commands I provided.

This has nothing to do with disk2s1.
