Need some help me for Asus P8H61-M LX3 R2.0

Beitrag von „kuckkuck“ vom 24. August 2018, 12:23

The only problem is that you have no defaults.plist in your BIOS.

I attached you a working defaults.plist and also a Bootmenu Theme. Insert these two files into your BIOS:

[Defaults and Theme.zip](#)

To use 10.12 Sierra, you don't have to insert APFS into your BIOS. But if you want to have APFS in your BIOS you can use the APFSDriverLoader instead of apfs itself. It uses a lot less space. Here is APFSDriverLoader.ffs:
