

B85-HD3 Problem (Здравствуйте!)

Post by “sergeylogachev” of Aug 27th 2018, 8:39 am

1. Ozmosis.fff macOS Mojave I have a problem, the download hangs (system start-up and new system installation), so I use the previous versiyu, the first one was installed at Sierra, is now a H-Sierra.

Here's what I got into the BIOS added:

Image not found or type unknown

2. Topic kexts, .plist-s(ACPI, Kernexst, Default) threw in the EFI partition.
Lilu conjunction with the ALC works, WatherGreen does not help
