I in the second paragraph he wrote that .plist for drivers are in the EFI section.

You can place the provided KernextPatcher.plist in your EFI and add Booter- or KextPatches to it (don't delete anything), but you don't have to. The KernextPatcher.plist is also integrated into KernextPatcher.ffs and in your ROM.

About the difference clover-ozmosis

Are you running the same WebDriver in both machines?
