Thanks! I gotta try it! Still I am having some problems with postinstall on Sierra. After I run OS from USB and install clover bootloader, it wont boot up from Hard Drive. Could you helpme with that? The only thing I do is downloading latest clover, apply standart patches in clover install utility, after I put my fake smc kext to the EFI folder. And after i try to boot up with the same arghs, it stops at the very begining.
