DarBoot - APFS Booteinträge mit Ozmosis

Beitrag von „taoarch“ vom 18. September 2018, 04:22

Sorry my words are too simple.

I inserted ffs file into bios, and modified the plist file to replace the raw.

And I tested in 10.13.6 it works perfect

but in 10.14 beta10, there is a strange problem which can not recognize the major-minor-revision just 0-0-0

I doubt this maybe caused by beta version

BTW is there anybody still working on hd4600 when start 10.14, it is stuck at the Apple logo and no progress bar! 😞
