

Erledigt

GA-Z87X-UD7 TH Ozmosis Sound und iTunes Probleme

Beitrag von „MAX_201“ vom 30. September 2018, 19:17

super danke, hat auf Anhieb funktioniert 😊

bleibt nur noch das mit drm 😕

VADADecoderChecker gibt immer noch das aus:

Code

1. VADADecoderCreate failed. err: -12473
2. An error was returned by the decoder layer. This may happen for example because of bitstream/data errors during a decode operation. This error may also be returned from VADADecoderCreate when hardware decoder resources are available on the system but currently in use by another process.
3. VADADecoderCreate failed. err: -12473
