Sierra auf einem Lenovo E460

Beitrag von „ramzha“ vom 10. Oktober 2018, 13:33

[user = '40717'] Harper Lewis [/ user] hey there! Finally my DW1560 came and i successfully installed it, Wifi works just fine (only 2 ghz for now) But bt refuses to get up. Can not even see it in ioreg usb devices. Any solutions? The problem is I have dualboot with windows 10, and wifi search is ok there, but bt is not working and cant connect to wifi. Do you have any solution?

If you have Lenovo e460 there's no version with nvidia if I'm not mistaken.

- 1) get rid of nv_disable, it gets kp
- 2) drop mfcg table
- 3) apply kernel pm
- 4) add fakeid to intel hd grapichs + inject
- 5) list your drivers in efi / drivers64uefi
