macOS Mojave on Asus N73SV Clover Botloader Legacy

Beitrag von „al6042“ vom 13. Oktober 2018, 17:18

Hi [sygey](#)

thanks for this post, but why did you add a "layout-id" in "Device (HDEF)" of the DSDT.aml, if you're using VoodooHDA?

The SSDT seems to belong to a single CPU and might have an issue with the other available types -> <https://www.asus.com/Laptops/N73SV/specifications/>

Is the DSDT created from the latest BIOS (Version 306 from 2011/09/07?)
