

# MacOS effort for Xiaomi Mi Notebook & Gaming laptop series

**Beitrag von „talebabatto“ vom 22. Oktober 2018, 17:46**

Is the disk image you cloned from the same model and BIOS version? If not, you need to reinstall. You shouldn't disable Nvidia GPU because you have a 1060 that is not a mobile version, so you can try to download the web drivers for high sierra and see if the GPU works.

In the worst scenario you could try setting a desktop SMBIOS, but first, try to reinstall and use web drivers.
