macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „Jakushevich“ vom 13. November 2018, 09:01

IQSV

If I boot from the boot menu, then after the appearance of the apple, it will immediately restart. But if I am loading from Hermit Shell, as in the screenshot, the system is loading. Thought that a problem with Darboot. Already removed it from the BIOS. The problem is not in it. I now wonder why it loads from Shell, and if I add an entry to the boot menu, then no. Any ideas? AptioFix and -norelocate does not work.
