B85MD3H SCREEN KEEPS BLACK UNLESS I PRESS F12 TO CHOOSE MAC TO BOOT

graphics:amd r9 380x using hdmi;

cpu:e3 1231 v3;

motherboard:gigabyte B85MD3H rev1.2;

I download **B85MD3H.F15-KU_XMAX.rom** from forum, but when I install or boot mojave 14.1, the screen keeps black unless I press F12 to choose mac in boot menu.

And with mac14.1 the default model, it runs slowly. I changed the model to mac pro 6,1 **B85MD3H.F15-KU_XMAX-MODEL_MODED.rom** it runs normally, but it displays only top left corner (F15 pressed still needed).

ps: I put whatevergreen.kext and lilu.kext in EFI? ? ?Efi? ? ?Oz? ? ?Darwin? ? ?Extensions??Common.

thanks very very much.
