OZMOSIS REQUEST THREAD / Ozmosis Anfragen [1. Beitrag beachten!]

Beitrag von „kuckkuck“ vom 14. November 2018, 14:58

[hansimglueck2](#) Was ist A2 laut Mainboard-Manual? Hast du eine ded. GPU irgendwo? Dann teste das mal.

[sinopan](#) No need to use Font-Size 18 😊

Sounds like a Theme problem... You seem to have too many boot entries to be displayed in the GUI. You can either disable the Theme by setting `UserInterface` to false in the defaults, or use DarBoot to Hide unnecessary Boot Options like `Preboot` etc. ([DarBoot Guide](#))

You should always use your own defaults.plist and not the generic OzmosisDefaults embedded into the ROM. The OzmosisDefaults is only there for working OS Install. After the installation process you should use your own defaults from EFI.
