kuckkuck Thanks! It works like a charm I am just have issues installing the 1.14.1 update(Should I just install using a 1.14.1 image?) and the Ozmosis theme doesn't seem to load I just get a black screen and I have to load into the OS from the bootmenu, I also tried inserting a theme into the EFI folder and that didn't work.

I am happy with what I have but if you have any suggestions to if this let me know.
