macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „witjojo“ vom 4. Dezember 2018, 03:56

Hello Kuckkuck,

i have read something now. But I have not understood everything yet.

At the moment I do not see any NVME SSD in the disk utility. **The device cannot be recognized.**

As I understood now the KernextPatcher.efs is already part of the Ozmosis ROM "Z97D3H.F9-XMAX.rom".

For the NVME SSD support i need now a KernextPatcher.plist belongs to the folder /EFI.

In the plist should now come in patch entries. I do not know yet which patch entries I need. But I think they depend on the hardware ID of the NVM Express-Controller.
