Erledigt macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „witjojo" vom 4. Dezember 2018, 13:20

At the moment I'm just trying to reach the NVME SSD.

But I am still on the road with old Ozmosis Rom Sierra and under macOS Sierra.

I think I will install first the Ozmosis ROM "Z97D3H.F9-XMAX.rom" and get the old Sierra running.

You have also the Board "GA-Z97-D3H". Are there problems with the Ozmosis ROM "Z97D3H.F9-XMAX.rom" and Sierra?

And which kext files do I need in addition under Sierra. Because I do not know what differences are between ROM Z97D3H_F9_Sierra.rom from Griven and Z97D3H.F9-XMAX.rom from you.

Then later in the second step, I will create a bootable USB installation stick with Mojave and try to install on the NVME SSD. If the NVME SSD is detected then. The hard disks with the Sierra system I disconnect as long as.
