

B85-HD3 Problem (Здравствуйте!)

Post by “derHackfan” of Feb 12th 2019, 4:03 pm

[Viktsav](#) im Anhang noch eine High Sierra APFS ready Version.

```
uwnigge -- -bash -- 80x24
* Current file: '4CF4B4CD-135F-4FDC-BAFB-1AA18A848D36_HfsPlus.ffs'...
* File not existant, inserting at the end of volume
* Current file: 'DADE1081-1B31-4FE4-8957-26FCEFC78275_FakeSMC.Rev-6.25-333-g05e0f4be.1759.ffs'...
* File not existant, inserting at the end of volume
* Current file: 'CFFB32FA-C2A8-4888-A8E8-4C3CA3FE8A7_APFS.ffs'...
* File not existant, inserting at the end of volume
Deleting non required Filesystem FFS...
* Removed 'Filesystem' [93822F8C-1F89-47EF-8882-5814FF689D0F5] successfully!
Reconstructing final image...
* Image built successfully!
Warning: File already exists! Overwriting it...
Bios successfully saved to '/Users/uwnigge/Desktop/Ozmosis High Sierra/OZMTool/output/ozmosis.ram'

Starting verification... If you see any unusual warnings/errors -> DONT USE THE IMAGE!
NOTE: You are using this application on your own risk anyway..
NOTE: 'parseOutputFile: descriptor parsing failed, descriptor region has intersection with BIOS region' can be ignored..
