Thanks Kaneske, I already have working SSDT's which was based on some of KGP;s work - but I thought this thread uncovered some specific settings to change that would make the dual Vegas work properly together ?

In my VideProc, I am seeing red for HW encode of H.264, which I believe had been fixed in this thread ?

Was hoping if someone could give me a working SSDT for dual Vegas, I could work out what to fix on mine
