Erledigt macOS 10.14.4 Beta1, 2x Vega64

Beitrag von „CMMChris“ vom 13. Februar 2019, 09:48

You need to use the 10.14.4 Beta. Also, no need for any SSDT. It's enough to use Whatevergreen for Dual Vega 64 or manually do the GFX0 and GFX1 Rename through Clover hotpatching.
