

Проблема с MSI Z97 PC Mate - Ozmosis

Post by “kuckkuck” of Mar 2nd 2019, 2:34 pm

As far as I understood this is just an experiment, so Viktsav just wants to try Ozmosis... If not ignore this comment 😊

For Ozmosis and High Sierra the use of UnSolid.kext and HFS instead of APFS is recommended.

If you want to use Mojave, unsolid doesnt work so you should use APFSDriverLoader and DarBoot. Make sure DarBoot is configured correctly as well as your BIOS and defaults.plist (BootEntriesFilter).
