

## **Erledigt** asus gl553vd

**Beitrag von „mt-fr“ vom 4. März 2019, 22:57**

Hi

[anonymous\\_writer](#)

after many time I'm come to work agin on this laptop .

Today I installed Mac OS 10.14.3 and use last clover file  
<https://github.com/Mohammadtag...jave-For-Asus-ROG-GL553VD>

but touchpad doesn't worked !!! I checked it but I can't fixed it .

I deleted the AppleIntelLpssI2CController.kext + AppleIntelLpssI2C.kext in S/L/E

and did

```
sudo touch /System/Library/Extensions/ && sudo kextcache -u/
```

```
sudo kextcache -i /
```

and tested i2c kext on s/l/e (VoodooI2C.kext + VoodooI2CHID.kext )

but but but doesn't worked ....

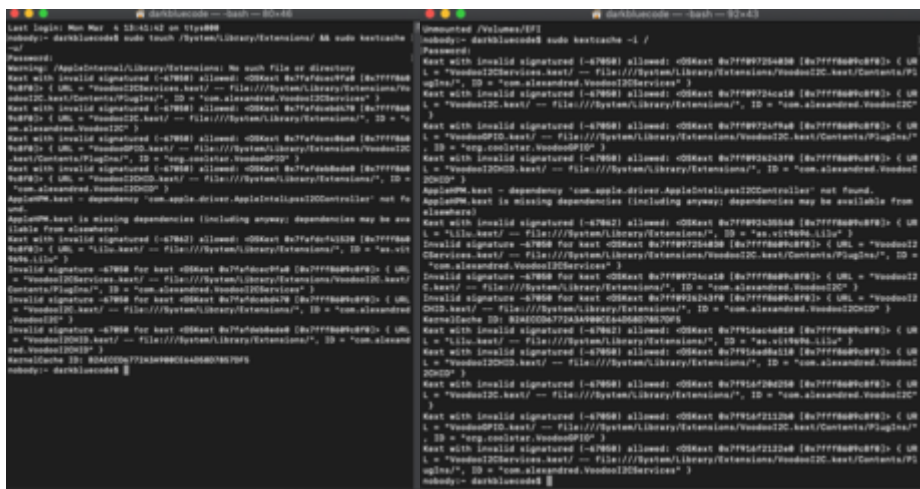

I get IORegistryExplorer for checking . please check it and help please . thank you .

-----

```
sudo touch /System/Library/Extensions/ && sudo kextcache =>
```

```
AppleHPM.kext - dependency 'com.apple.driver.AppleIntelLpssI2CController' not found.
```

```
AppleHPM.kext is missing dependencies (including anyway; dependencies may be available from elsewhere)
```

update March 5 2019

today I used origin DSDT.aml and I patch it with

```
into method label _DSM parent_label TPD0 remove_entry;
```

begin

```
Method (_DSM, 4, Serialized) // _DSM: Device-Specific Method ELAN1200 \n
```

If (LEqual (Arg0, HIDG))\n

```
Return (HIDD (Arg0, Arg1, Arg2, Arg3, HID2))\n
```

```

}\n
\n
If (LEqual (Arg0, TP7G))\n
{\n
Return (TP7D (Arg0, Arg1, Arg2, Arg3, SBFB, SBFG))\n
}\n
\n
Return (Buffer (One))\n
{\n
0x00 \n
})\n
}\n
end;

+

# Windows 10 DSDT Patch for VoodooI2C
# Allows I2C controllers and devices to be discovered by OS X.
# Based off patches written by RehabMan

into_all      method      code_regex      If\s+\[\\]\?_OSI\s+\\(\"Windows\s2015\\\"\\)\)
replace_matched begin If(LOr(_OSI("Darwin"),_OSI("Windows 2015")) end;

```

when booted system with new DSDT.aml file , touchpad worked good but when I tested these patching code for last edit by you , doesn't worked.

I got IORegistryExplorer file when I booted system with new DSDT.aml ( working touchpad ) for checking .

[Zitat von anonymous writer](#)

This two files should get work Apple Intel Thermal Subsystem and Intel SMBus Controller .

Intel Gaussian Mixture Mode > Does this device also exist for OSX and when yes which

driver will be load?

If you can answer this question I can connect the device with the OSX device driver.

Fan > No Device ID, therefore unfortunately no possibility to integrate this in OSX.  
Sorry.
