## SecureErase unter Mojave

Beitrag von „rubenszy“ vom 7. März 2019, 14:01

Über Terminal kannst du dies noch machen

```
bob@-iMac:- bob$ diskutil secureErase
Usage: diskutil secureErase [freespace] level MountPoint[DiskIdentifier][DeviceNode]
Securely erases either a whole disk or a volume's freespace.
Level should be one of the following:
0 - Single-pass zeros.
1 - Single-pass random numbers.
2 - US DoD 7-pass secure erase.
3 - Gutmann algorithm 35-pass secure erase.
4 - US DoD 3-pass secure erase.
Ownership of the affected disk is required.
Note: Level 2, 3, or 4 secure erases can take an extremely long time.
```

Einmal 0 durchlaufen lassen reicht.
