Now I understand what you mean. 😊

This DSDT.am patch fits only to this one VoodooI2C.kext in this post and is outdated.

For the new VoodooI2C.kext + VoodooI2CHID.kext V2.1.4 this patch blocks the function and can not be used anymore.

You need now only this patch:

https://github.com/alexandred/...er/Windows/Windows_10.txt
Instead of this patch, the SSDT-HACK.aml should also work if it fits to your original DSDT.aml.

It is important that you completely remove the posted patch from your system. >>>
Allows I2C controllers and devices to be discovered by OS X
