

# Hilfe: Thinkpad E460 Sierra AKKU Probleme

**Beitrag von „ramzha“ vom 8. März 2019, 13:11**

Greetings! [user = '42123'] Masterkey85 [/ user] 20EU-S01E00. Same specs core i7 6500u 8gb stick

R7 m3.

I can help you with your wifi. DW 1560, the main idiotic thing that bios does not have whitelist BUT - only a few revisions of dw 1560 work. I bought one from aliex and worked only wifi but not bt. Under windows did not work any of them.

So I bought new one- in the back it was written something like bcm 9243 \*\*\* \_ zae3. (I might spell it wrong)

So few steps -install usbinjectall kext.

This will make you see card in ioreg

Then follow up with lily and plugins for wifi

and brcm patch ram for bt. I'm on a way now, can not drop my clover and other needed Kexts if you like. Add me on skype for better communicating: Serghio.ramos
