TINU dreht sich im Kreis! Hilfe!

Beitrag von „Hack-Noob“ vom 18. März 2019, 10:52

I'll try to see if I can create the problem again.

I used a MacBook Pro late 2011 that got it's logicboard swapped with a mid 2012. I kept my 16GB RAM from the 2011 (which seems to have resulted in some graphic's card issues with freezes - at least once when using TINU but seems to be a coincidence).

I created a fusiondrive with an internal SSD and the original HDD some years back. OS is High Sierra.

The USB drive was a USB 2.0 in each case. One with 16GB and one (first one tried) with 32GB.
