[English] I need some help with Mojave and Z77X-UD5H and Ozmosis. This is the best place, but I don't speak German. Can anyone help?

Beitrag von „colourofsound“ vom 10. Mai 2019, 08:57

Hi,

I have a Z77-UD5H board, and have successfully uploaded the latest BIOS from this forum on to it.

My Sierra installation works fine, and I can begin the Mojave install from USB but it always stops with the firmware invalid error message.

How do I get around that?

Thanks!
