Hello,

I am sorry that I do not write in Germany.

I encountered problems on your settings.

1. I would like to ask you why you're using "SYMBIOS iMac Pro 1.1"? This is iMac 19.1.

2. Do you have profile 1 (XMP) running in the "BIOS"?

3. Do you lose USB ports after you go out of sleep?

4. Do you have a problem with memory allocation from AptioMemoryFix?

My computer does not work with it, and I have the same as you.

Thanks.
