> Why change the EFI from mine to his if the installation went fine with another stick? Didnt it run well?
>
> EDIT: You have to install Clover this time on the EFI of the SSD (not the stick) and copy the files from the EFI from the USB drive to the EFI of the SSD. Then you have clover on the SSD, so you dont need the USB drive anymore.

Hi Kazuya91 your EFI run but the problem is it won't boot to the SSD if the USB is removed....that's why i tried his EFI but still the same it won't boot with out the usb stick....so what i need to do now is download the latest clover and install it on the efi in the SSD and copy the EFI folder from the usb installer is that correct? sorry i'm new with this...is this the file i need to download? Clover EFI Bootloader 2.4.4920....thanks in advance
