Unterschiede laut Google:

The T440s is only 0.4mm slimmer. The T440s is really the "premium-version" of the T440, which means:

- Smaller chassis: T440s has a 13" footprint (like the X1 Carbon) and it is closer to the 12" models, the T440 has a more classical 14" formfactor
- Better and more high-end materials (Carbon on the T440s instead of Glass-Fiber on the T440), and because of this, lighter chassis
- One additional USB 3.0 port (3x USB instead of two)
- More powerful dGPU (730M instead of 720M)
- FHD IPS display option
- Glass touchpad instead of Mylar
- 4 GB more RAM on the i5 CPUs (since the T440 only has 8 GB of RAM as maximum on the i5-versions, only the i7-models of the T440 have 4 GB soldered)
