Das ist der output des hackintool

The image is a screenshot of the Hackintool application's output window. It displays a detailed list of system components and their configurations, organized into several columns. The columns include 'Device', 'Model', 'Manufacturer', 'Version', 'Status', and 'Notes'. The list contains various hardware components such as the CPU (Intel Core i7-8650U), Memory (DDR4), Storage (SSD), Graphics (Intel UHD Graphics 620), and Network (Ethernet and Wi-Fi). The status of each component is indicated, and some entries have additional notes or warnings. The interface is typical of a macOS utility application, with a standard toolbar at the top and a scrollable list area.

Laut der Lenovo Seite handelt es sich um ein ELAN Input Device For WDF
