## **Lilu/WhateverGreen and Ozmosis - Graphics in Mojave**

**Beitrag von „colourofsound“ vom 11. August 2019, 12:30**

Everything was set to auto. Set it to init PCI first - same issue.

I can see the the Lilu and WhateverGreen Kexts arent even loaded.

Also, I've edited my SMBIOS in Defaults.plist, but its not changed in About this Mac? Very odd.
