## **Festplattendienstprogramm: Fehler warning found orphan dstream id object**

**Beitrag von „Leggalucci“ vom 13. September 2019, 09:36**

[griven](#)

Habe die ganzen lokalen Snapshots alle gelöscht. Trotzdem taucht noch immer der Fehler auf

Erste Hilfe auf „macOS“ (disk3s1) ausführen

HINWEIS: „Erste Hilfe“ sperrt das Startvolume vorübergehend.

Verifying file system.

Volume could not be unmounted.

Using live mode.

Performing fsck\_apfs -n -l -x /dev/rdisk3s1

Checking the container superblock.

Checking the EFI jumpstart record.

Checking the space manager.

Checking the space manager free queue trees.

Checking the object map.

Checking volume.

Checking the APFS volume superblock.

The volume macOS was formatted by hfs\_convert (748.77.8) and last modified by apfs\_kext (945.275.7).

Checking the object map.

Checking the snapshot metadata tree.

Checking the snapshot metadata.

Checking the extent ref tree.

Checking the fsroot tree.

warning: found orphan dstream id object (id 1363867, refcnt 1)

Verifying allocated space.

Performing deferred repairs.

warning: found orphan dstream id object (id 1363867)

The volume /dev/rdisk3s1 appears to be OK.  
File system check exit code is 0.  
Restoring the original state found as mounted.

Vorgang erfolgreich.
