

Erledigt

Screen zeigt Fehlermeldung, brauche Hilfe

Beitrag von „nehval“ vom 25. Oktober 2019, 16:55

Save & Exit

- Load Optimized Defaults then make (or confirm) the following settings -- important settings in **bold**:

M.I.T.

- Extreme Memory Profile (X.M.P.) → **Profile 1**

BIOS

- Windows 8/10 Features → **Other OS**
- CSM Support → **Enabled**
 - Secure Boot will be disabled by default, but good to check

Peripherals

- Initial Display Output → PCIe Slot 1. If your discrete graphics card is in Slot 2, change this appropriately.
- Intel Platform Trust Technology (PTT) → Disabled
- Thunderbolt(TM) Configuration
 - TBT Vt-d Base Security → **Disabled**
 - Thunderbolt Boot Support → **Disabled**
 - Security Level → **No Security**

USB Configuration

- Legacy USB Support → Enabled
- XHCI Hand-off → **Enabled**
- Network Stack Configuration
 - Network Stack → **Disabled**

Chipset

- Vt-d → **Disabled**
- Internal Graphics → **Enabled**
- [DVMT](#) Pre-Alloc → 64M
- [DVMT](#) Total Gfx Mem → 256M
- Audio Controller → **Enabled**
- Above 4G Decoding → **Enabled**

Power

- ErP → Disabled
- RC6 (Render Standby) → Enabled

Das sind meine [BIOS einstellungen](#). Oder sind screenshots besser?
