

[SUCCESS] Gigabyte Z390 M Gaming + RX 580 Nitro+ [EFI im Anhang]

Beitrag von „DSM2“ vom 27. Oktober 2019, 14:11

Altemirabelle ??? My EFI folder had only the USBInjectAll Kext and the port limit patch included.

From which Wrong USB kext are you talking about ?

[Kazuya91](#) [sunilpiano1234](#) Maybe this EFI will be even better...

Clover 5070 because of the issues the newer versions have and also a better solution for AptioFix based on the OC solution.

All Kexts are also up to date...

Test first from a pen drive before replacing the existing EFI Folder...

Also I have to mention that you still have to create a custom USB Kext or use one from someone else with this board.

Me Personally would just create a new one straight away but I am not you guys.

Feedback is welcome, just by the way!
