[user = '50709'] greglamy [/ user] Welcome here. One question. Is that just right for RX 5700 XT GPU's or is it possible to use it for Vegas too? Thx.

I just added Navi support for my specific device (0x731f).

If other Navi devices are missing, will add them upon request.

Currently installing 10.15.2 ... hope it fixes the wake from sleep problem with Navi
