Neubau Hackintosh "MSI MPG Z390 GAMING PLUS Intel Z390" mit "Intel Core i7 9700" und "Sapphire AMD Radeon RX 560 Pulse"

Post by "NoBody_0" of Nov 18th 2019, 9:09 pm

solange LegacyEnable auf NO ist, 3 ist nicht nötig

ich würde auf 6 umstellen

```
3. LegacyEnable
Type: plist boolean
Fail-safe: false
Description: Enables loading of NVRAM variable file named nvrans.plist from EFI volume root.
This file must have root plist dictionary type and contain two fields:
  • Version — plist integer, file version, must be set to 1.
  • Add — plist dictionary, equivalent to Add from config.plist.
Variable loading happens prior to Block (and Add) phases, and will not overwrite any existing variable. Variables
allowed to be set must be specified in LegacySchema. Third-party scripts may be used to create nvrans.plist
file. An example of such script can be found in Utilities. The use of third-party scripts may require
ExposeSensitiveData set to 0x3 to provide boot-path variable with OpenCore EFI partition UUID.
WARNING: This feature is very dangerous as it passes unprotected data to your firmware variable services.
Use it only when no hardware NVRAM implementation is provided by the firmware or it is incompatible.
```
