

Gigabyte C621 Aorus Xtreme ALC1220VB Problem

Beitrag von „DSM2“ vom 9. Januar 2020, 17:20

No offense but the days of distributing my EFI's are over. Often they were used somewhere where they had nothing to do there.

In the worst case the user changed them and added some kind of garbage, which has no place there and therefore put me in a negative light or were even made money with my work by selling them.

That's why I don't do that anymore...

[MacPeet](#) can maybe help you with the codec.

You can send me your EFI via PN and I can have a look on your problem but I don't share anything... Specially not my configuration.
