El Capitan auf dem T61? Ja aber sicher doch!

Beitrag von „miljoneir“ vom 9. Februar 2020, 11:38

[MacPeet](#)

Sorry for using English, I can only read but not really write or speak German 🤔

Thank you for the CLOVER zip. I was able to fully get Catalina to run on my T61.

One problem: changing brightness only works now in the system usb installer, but not in the installed OS. Even when both are started with the same clover config/kext. I recheck 20 times, and it is fully reproducible.

Any idea why? (I also retried with a Mohave install)

I used the latest catalina version 10.15.3 from the app store. Did they break brightness changing again in a new update?

Above you mentioned "Helligkeitsproblem ab Sierra lösen". How did you do this? The same modification in the DSDT?

In Sierra and high sierra, I was able to change brightness using a 3th party app like 'Brightness slider' from the app store. This app does not work in mohave/catalina due to the change in DSDT I think.

Thanks in advance,
