ASUS P8H77-M Pro mit OpenCore

Beitrag von „peerole“ vom 23. März 2020, 22:32

Hallo,

exact!

habe einen USB3.0 Stick 8Gb und versuche Mojave drauf zu installieren.

Habe es bereits mit Tinu probiert.

Datei von Mojave ist vorhanden aber leider schlägt des fehl.

Hier mal die Log Daten

Zitat

Starting installer creation process ...

Asking for user authentication ...

User successfully authenticated

Starting volume partition scheme change

Formatting disk and change partition scheme with the command:

diskutil eraseDisk JHFS+ Installer /dev/disk2

Asking for password

Volume partition scheme changed with sucess

The application that will be used to create the installer is: /Applications/Install macOS Mojave.app

The target drive is: /Volumes/Installer

The script that will be performed is: /Applications/Install\ macOS\ Mojave.app/Contents/Resources/createinstallmedia --volume /Volumes/Installer --applicationpath /Applications/Install\ macOS\ Mojave.app --nointeraction;exit;

Installer creation started, waiting for createinstallmedia to finish ...

Password got with success

macOS install media creation took 488 seconds to finish

macOS install media creation finished, createinstallmedia has finished

macOS install media creation output produced:

Copying to disk: 0%... 10%... 20%... 30%... 40%... 50%... 60%... 70%... 80%... 90%... 100%

Making disk bootable...

Copying boot files...

Install media now available at "/Volumes/Install macOS Mojave"

macOS install media creation error/s produced:

Password:WARNING: "--applicationpath" is deprecated in macOS 10.14 and greater. Please remove it from your invocation.

Erasing disk: 0%... 10%... 20%... 30%... 100%

macOS install media creation failed, createinstallmedia returned an error while creating the installer, please, erase this drive with disk utility and retry

AutorizationFree executed successfully
