

Vorke Notebook 15: Ein "Budget MacBook" - inkl. EFI

[CMMChris](#)

Could you help me? I purchased a laptop, not a Vorke. While searching for a solution to install MAC OS, I came across your site. I have the same problem "UEFI booting is deactivated when Secure Boot is deactivated."

I compared the board and the BIOS version on my laptop, they are the same with Vorke laptop. I attached images

However, I am afraid to flash your version of BIOS, being afraid to damage my laptop. How can I dump bios and edit it or maybe compare with yours? O maybe there is some other way without updating the BIOS?
